

Constante C. Dizon II

[Linkedin](#) | [Portfolio](#) | 09934331551 | dizonconstante3@gmail.com

Education

Adamson University

BS in Computer Science, (Specialization in Data Science)

Manila, PH

Graduated July 2026

Relevant Coursework: Software Engineering, Data Structures and Algorithms, Artificial Intelligence, Machine Learning, Data Science and Analytics, Data Visualizations and Business Intelligence, Object-Oriented Programming

Professional Experience

Filmetrics Corporation

Developer & Quality analyst Intern | March 2026 - June 2026

- Built and maintained data pipelines within Odoo ERP using Python and SQL, automating employee work-hour extraction and payroll report generation.
- Designed data validation and quality-check processes to ensure accuracy and consistency across payroll records and downstream reports.
- Managed and validated employee payroll data, ensuring accuracy and consistency across records and reports.
- Applied SQL for data extraction, transformation, and loading (ETL) across multiple payroll-related datasets (PRR, PhilHealth, HDMF, SSS).
- Customized ERP data structures and workflows, gaining hands-on experience with relational database design, data architecture, and system integration.
- Automated recurring reporting workflows, reducing manual data handling and improving reporting turnaround.

Project Experience

Paysafe – Scam Detection System using LSTM and SVM

Thesis, Co-Author, Data pipeline & A.I Developer | 2024 - 2025

- Designed and built an end-to-end data pipeline processing 10,632 multilingual (Taglish) SMS records: ingestion → cleaning/normalization → feature engineering → model-ready dataset output.
- Engineered data preprocessing workflows for unstructured text data, including tokenization, normalization, and categorical encoding, transforming raw data into structured, ML-ready formats.
- Built and deployed a Flask-based REST API to serve processed data and model outputs to a web application, handling real-time data flow between backend and front end.
- Managed dataset versioning and model persistence to support reliable, repeatable pipeline runs.

Barangay Community Information System

Full-Stack Developer | 2023

- Developed a system community information management system with CRUD functionality for resident records.
- Designed and managed a MySQL database to store and retrieve resident information efficiently.
- Integrated the application with the database to support secure and reliable data management operations.

Brewtelligence – Coffee Flavor Detection Model (Mocha vs. Latte)

Full Stack Developer | 2024

- Developed a Convolutional Neural Network (CNN) to classify coffee drink images (Mocha vs. Latte) based on visual features.
- Trained and validated the model using TensorFlow/Keras, achieving consistent accuracy on test data.
- Evaluated results using a confusion matrix and classification metrics (precision, recall, F1-score).

Certification

- May 13, 2025 | IT Specialist – Networking
- May 5, 2026 | IT Specialist – Cybersecurity

Skills & Interests

Technical: Python, SQL, Java, MySQL, ETL/Data Pipelines, Data Modeling, Database Management, REST API Development (Flask), Power BI

Research & Frameworks: NLP, TensorFlow, Keras, LSTM, SVM, CNN

Concepts: Data Ingestion & Transformation, Data Validation/QA, ERP Data Architecture, Relational Database Design

Research & Frameworks: NLP, TensorFlow, Keras
