Education

Adamson University

Manila, PH

BS in Computer Science, (Specialization in Data Science)

Graduated July 2026

Relevant Coursework: Software Engineering, Data Structures and Algorithms, Artificial Intelligence, Machine Learning, Data Science and Analytics, Data Visualizations and Business Intelligence, Object-Oriented Programming

Professional Experience

Filmetrics Corporation

Developer & Quality analyst Intern | March 2026 - June 2026

- Utilized and enhanced payroll management modules in Odoo using Python, improving employee payroll processing and data handling workflows.
- Developed and deployed payroll-related features that automated employee work-hour extraction and Excel report generation.
- Managed and validated employee payroll data, ensuring accuracy and consistency across records and reports.
- Applied SQL and Python for data processing, data management, and system customization within the Odoo ERP environment.
- Gained hands-on experience in database operations, data architecture, and enterprise resource planning (ERP) systems.

Project Experience

Paysafe – Scam Detection System using LSTM and SVM

Thesis, Co-Author, Back-end Developer & A.I Developer | 2024 - 2025

- Developed and trained a hybrid LSTM-SVM model for SMS scam detection using a dataset of 10,632 messages.
- Performed data collection, cleaning, normalization, tokenization, and feature engineering to improve model performance.
- Achieved 81% classification accuracy by applying NLP techniques to multilingual (Taglish) and obfuscated SMS patterns.
- Designed and deployed RESTful APIs using Flask to integrate the machine learning model with the web application.
- Managed model deployment and backend integration, ensuring real-time scam message classification within the system.

Barangay Community Information System

Full-Stack Developer | 2023

- Developed a system community information management system with CRUD functionality for resident records.
- Designed and managed a MySQL database to store and retrieve resident information efficiently.
- Integrated the application with the database to support secure and reliable data management operations.

Brewtelligence – Coffee Flavor Detection Model (Mocha vs. Latte)

Full Stack Developer | 2024

- Developed a Convolutional Neural Network (CNN) to classify coffee drink images (Mocha vs. Latte) based on visual features.
- Trained and validated the model using TensorFlow/Keras, achieving consistent accuracy on test data.
- Evaluated results using a confusion matrix and classification metrics (precision, recall, F1-score).

Certification

- May 13, 2025, | IT Specialist – Networking
- May 5, 2026, | IT Specialist – Cybersecurity

Skills & Interests

Technical: Python, SQL, Java, Power BI, Data Analyst, Database Management

Research & Frameworks: NLP, TensorFlow, Keras, LSTM, SVM, CNN

Language: Fluent in Filipino and English

Interests: Python, Java, SQL, MySQL, Database Management, REST API Development, Flask, Object-Oriented Programming, Software Development, Git, Power BI
